

## ASSET CONDITION & COMPLIANCE

### RIG SURVEYS

Wagenborg Foxdrill can carry out, independent rig surveys on all types of onshore and offshore drilling rigs.

Service types include (but are not limited to): Full Condition Survey, Site / Factory Acceptance Tests, (intrusive) Condition Surveys, Rig Commissioning, Compliance Surveys, Ex Surveys and HSE Surveys. The client can specify if the service needs to be carried out on the entire rig or limited to specific areas such as: Well Control, Drilling equipment, Mud system, Power management, etc.

Surveys are carried to verify conformity with API, IEC, ISO, DNV and/or client specific standards. If other standards need to be applied this can be evaluated during the scope determination process in cooperation with the client.

Our experienced surveyors ensure the delivery of comprehensive information / reports which provide a clear insight in the assets technical and/or compliance status. Additionally the findings which need correction are provided in a practical format which can be utilised to record and track the correction and close out process. If desired the reports can be stored and accessed on a webbased application for easy referencing to both office and rig based personnel.

During the execution of the survey client representatives are regularly informed on the progress of the survey, this includes findings of high importance / with an immediate risk to the asset integrity or safety.

# ASSET CONDITION & COMPLIANCE

## M<sup>3</sup> SURVEY

In today's energy industry many asset owners are looking for ways to further optimize their efficiency while reducing asset related costs and risks. To support our clients in their efforts to do so Wagenborg Foxdrill can carry out a comprehensive M3 Survey.

The M3 Survey is an integrated survey approach focusing on 3 major aspects of business; Methods, Manpower & Machine. This includes elements such as management systems, organisation structure, responsibilities, quality & HSE management, training & competence, asset condition & performance and maintenance in relation to the asset life. As the Survey leads to a numerical scoring in key areas it can also be used as a benchmarking tool.

The M3 Survey can be applied broadly or focussed on a particular part of the organisation or asset. Also specific operational area's such as well control can be the focus of a M3 Survey. It provides a clear insight in risks, performance and improvement opportunities and helps finding balance in the 3 major aspects. Additionally it also supports the client in achieving compliance with relevant standards.

The scope and approach is always determined / customised in close cooperation with the client. This way desires and expectation can be clearly translated in to target areas, ultimately resulting in solid improvement suggestions which can contribute to performance increase and cost reductions.
